CERTIFICATIONS

AWS Certified Developer Associate
Scrum Alliance Certified
ScrumMaster (CSM)

Juan Cruz Martinez

Senior iOS Engineer

PROFILE

Seasoned iOS engineer with 9 years of experience building high-performance financial and productivity apps for LatAm fintechs and remote US clients. Expert in Swift, SwiftUI, Combine, and modern iOS architectures, with a proven track record of reducing latency, increasing user engagement, and streamlining release pipelines through automation and rigorous testing.

EXPERIENCE

Senior iOS Engineer, Naranja X

2022 – Present

Buenos Aires, Argentina

- Led migration of legacy UIKit codebase to SwiftUI for the home dashboard, reducing UI rendering latency by 35% and decreasing crash rate from 2.1% to 0.7% across 1.2M monthly active users.
- Implemented Combine-based reactive networking layer that consolidated REST and GraphQL APIs, cutting average network request time from 820ms to 460ms and enabling feature-flag rollout for three new credit products.
- Automated release pipeline with Fastlane and GitHub Actions, increasing bi-weekly release frequency from 1 to 4 and reducing manual QA effort by ~200 hours per quarter.
- Mentored a team of four junior iOS engineers, establishing code-review standards that raised average pull-request approval score from 78% to 94% in SonarQube.
- Introduced feature toggles via LaunchDarkly to A/B test a new loan simulator, boosting conversion rate by 12% and generating an additional ARS 4.5M in quarterly revenue.

iOS Engineer (Contract), GitLab

2020 – 2022

Remote (Buenos Aires, Argentina)

- Developed a SwiftUI-based offline-first notes app for GitLab's internal knowledge base using Core Data and CloudKit sync, achieving 99.9% data integrity and supporting 15k+ daily active employees.
- Integrated GraphQL subscriptions via Apollo iOS, reducing real-time update latency from 1.2s to 180ms and enabling live collaboration features used by eight distributed teams.
- Wrote comprehensive XCTest unit and UI tests covering 78% of critical paths, cutting post-release bugs by 40% in staging environments.
- Optimized app bundle size by 22% through asset-catalog trimming and lazy module loading, improving download times on low-bandwidth connections.
- Collaborated with product and UX teams in biweekly sprints, delivering six feature releases that adhered to WCAG 2.1 AA accessibility standards.

iOS Engineer, Ualá

2017 – 2019

Buenos Aires, Argentina

- Built the initial version of Ualá's expense-tracking module using UIKit and RxSwift, attracting 250k users within the first six months and increasing daily active users by 18%.

- Implemented Core Data migration strategy that safely transformed user data schema across three app versions, preserving 100% of historical transaction records for 500k+ users.
- Reduced app launch time from 4.8s to 2.2s by launching asynchronous initialization of analytics and networking stacks, improving user retention by 7% in cohort analysis.
- Created a Fastlane automation pipeline that automated beta distribution to TestFlight, cutting release turnaround from 3 days to 4 hours.
- Participated in cross-functional squads of six engineers, conducting peer code reviews that maintained an average code coverage of 72% across new features.

EDUCATION

Universidad de Buenos Aires
Licenciatura, Sistemas · 2011–2016
