SUMMARY

Data Scientist with 4 years of experience building predictive models and analytics pipelines for retail and health-technology organizations. Expertise in Python, SQL, and causal inference methods to drive product decisions and revenue growth. Proven track record of delivering measurable impact through A/B testing, automated ETL, and interactive dashboards.

EXPERIENCE

Data Scientist · Dialogue, Toronto, ON

09/2024 – Present

- Built a logistic-regression churn prediction model integrated into the product dashboard, enabling targeted outreach that lowered monthly churn from 6.2% to 5.7% and preserved roughly CAD 1.2 million in annual recurring revenue.
- Applied difference-in-differences causal inference to evaluate a new video-consultation feature, showing a 15% increase in weekly active users and informing a product-wide rollout adopted by 80% of clinicians.
- Created a suite of Tableau dashboards tracking provider utilization, appointment no-show rates, and revenue per visit, adopted by 30+ clinic managers and cutting manual reporting effort by an estimated 10 hours per week.
- Implemented dbt models to transform raw FHIR-based encounter data into a feature store, decreasing data refresh time from 4 hours to 20 minutes and enabling real-time model scoring.
- Designed and executed an A/B test on two subscription-pricing tiers, achieving a 6% uplift in conversion rate and contributing to CAD 450 k incremental quarterly revenue.

Data Scientist · Loblaw Companies Limited, Toronto, ON

09/2022 – 08/2024

- Developed a gradient boosting model predicting customer response to personalized promotions, increasing coupon redemption rate by 12% and generating an additional CAD 3.4 million in annual revenue across 500 stores.
- Designed and deployed an Airflow-orchestrated ETL pipeline that consolidated POS and loyalty data, cutting report generation latency from 6 hours to 15 minutes and supporting daily refreshes for 200+ store managers.
- Conducted a series of A/B tests on shelf-layout modifications in 120 stores, measuring a 4.5% lift in average basket size and informing a rollout that contributed to CAD 1.1 million quarterly sales uplift.
- Refactored legacy SQL queries using partitioning and materialized views, reducing ETL runtime by 40% and saving approximately 150 compute-hours per month on the Redshift cluster.
- Mentored two junior analysts on model validation and code review practices, improving team throughput and reducing critical bug incidence by 30%.

SKILLS

Python	pandas	scikit-learn	XGBoost	SQL	R
Tableau	dbt	Apache Airflow	AWS Redshift	Git	
Docker	A/B testing	causal inference	Apache Spark		

EDUCATION

BSc Mathematics

University of Toronto, 2017–2021

MSc Statistics

University of Toronto, 2021–2022

LANGUAGES

English (Native)

French (C1)

Mandarin (B1)

CERTIFICATIONS

AWS Certified Data Analytics – Specialty

Tableau Desktop Specialist
