SKILLS

Java
Spring Boot
Kotlin
Hibernate
PostgreSQL
RabbitMQ
Docker
Azure
RESTful API design
Microservices
CI/CD
Apache Kafka
JUnit 5
Mockito
Maven
Gradle
Linux
Terraform
Prometheus
Grafana

LANGUAGES

Portuguese – Native
English – B2
Spanish – B1

CERTIFICATIONS

Oracle Certified Professional Java SE 11 Developer
Microsoft Certified: Azure Developer Associate

Maria Clara da Cunha

Java Backend Engineer with 6+ years of experience building scalable microservices on Java, Spring Boot, Kotlin and Azure

PROFILE

Experienced backend engineer specializing in high-throughput, low-latency services for financial and delivery platforms. Proven track record of improving system performance, reducing incident rates, and accelerating delivery cycles through containerization, event-driven architectures and robust CI/CD pipelines. Adept at mentoring junior engineers and collaborating across product, data and ops teams to meet aggressive business goals.

EXPERIENCE

Java Backend Engineer, iFood

Jun 2023 – Present

São Paulo, Brazil

- Designed and implemented a new order-matching microservice in Java Spring Boot that reduced average order processing latency from 420 ms to 180 ms, handling peak load of 120 k RPM.
- Migrated legacy payment processing module to Kotlin coroutines, cutting CPU usage by 25 % and enabling horizontal scaling to 30 pods on Azure Kubernetes Service.
- Introduced contract-testing with Pact and automated schema validation, decreasing production-incident rate related to API breaking changes by 60 % over six months.
- Built a RabbitMQ-based event-driven pipeline for real-time restaurant-status updates, increasing throughput to 2 M events/day while maintaining <5 ms end-to-end latency.
- Led CI/CD improvements using GitHub Actions and Azure Pipelines, reducing average deployment time from 45 min to 12 min and enabling 4-times-daily releases.

Java Backend Engineer, Itaú Unibanco

Jun 2020 – May 2023

São Paulo, Brazil

- Developed a Spring Boot-based account-statement micro-service that serves over 5 M daily requests, improving response time from 320 ms to 140 ms and supporting 2× traffic growth during Black Friday campaigns.
- Optimized Hibernate queries and introduced second-level caching with Ehcache, reducing average DB load by 35 % and cutting average transaction time for loan-approval flow from 2.8 s to 1.9 s.
- Implemented distributed tracing with OpenTelemetry and Jaeger across 12 services, cutting mean-time-to-detect for latency spikes from 45 min to 8 min.
- Containerized legacy monolith components using Docker and deployed them to Azure Container Instances, achieving 99.9 % availability and enabling blue-green releases with zero downtime.
- Automated regression test suite with JUnit 5 and Mockito, increasing test coverage from 68 % to 92 % and reducing production defects related to backend changes by 40 %.

EDUCATION

Universidade de São Paulo (USP)

BSc, Computer Engineering · 2014–2018
